

Biomedical Laboratory Technology Program
140.CO

Diploma of College Studies

Summary Document

Aims and Goals of the Program

The aim of the Biomedical Laboratory Technology program is to train technologists who will be proficient in the procurement and analyses of biological specimens and who are capable of interpreting the results obtained by such analyses. It is anticipated that program graduates will be able to apply their knowledge and acquired skills in a wide variety of laboratory settings in order to make an effective contribution to the prevention, diagnosis, monitoring and treatment of disease.

The goals of the Biomedical Laboratory Technology program are to enable the student:

to acquire competence in the practice of the profession, i.e., in carrying out the tasks
